1 Primary Health Care Research and Information Service, University of New South Wales, Australia. 2 Centre for Primary Health Care and Equity, University of New South Wales, Australia.

**Objective:** The research aims to assess strategies for knowledge exchange and to improve the effectiveness of knowledge exchange in primary health care (PHC) research. The research questions focus on identifying effective knowledge exchange strategies and their impact on the success of research projects.

**Methods:** A systematic review of knowledge exchange strategies in primary health care research was conducted. The review included literature from 2000 to 2020, focusing on strategies that facilitate knowledge exchange between researchers and stakeholders.

**Results:** Strategies identified included: 1) Co-creation: involving stakeholders throughout the research process; 2) Co-development: working in partnership with stakeholders to develop research questions and methods; and 3) Co-dissemination: ensuring that research findings are communicated to stakeholders in a meaningful way.

**Conclusion:** Effective knowledge exchange strategies are crucial for the success of research projects in primary health care. Increasing stakeholder engagement and involvement from the outset can lead to more relevant and useful research outcomes.
